

POWERFUL WATER TREATMENT

EARTHTEC®

NSF®

Certified to
NSF/ANSI 60

APPLICATIONS

LAKES AND RESERVOIRS

QZ will suppress and control quagga and zebra mussels from areas that they have already colonized. For reservoirs or small lakes where adult mussels have infested the bottom and shoreline, QZ can be spread at the surface or pumped down to the sites of worst infestation. Application does not require any specialized equipment because QZ disperses readily and rapidly throughout the treated areas to a uniform concentration.

POWER PLANTS

Power plants can use large volumes of water for cooling and mussel veligers may be present in that water, leading to infestation. QZ is used to prevent infestation and keep systems clean so they can operate at maximum efficiency.

IRRIGATION SYSTEMS AND GOLF COURSES

QZ prevents and eliminates quagga and zebra mussels in golf course water features and all manner of irrigation systems, including drip irrigation and their emitters.

AQUEDUCTS, CANALS AND PIPELINES

QZ prevents the spread of mussels in water being conveyed by open aqueducts, canals and pipelines. Since the volumes of water tend to be very large, a pulsed dose is one strategy for reducing chemical and expense.
